

GENIE Coin

The AI Coin That Makes Millionaires

“Fill the Lamp. The Genie Agent makes a millionaire. Then it does it again.”

GENIE is where crypto meets AI. Every buy and sell pays a small fee, and 100% of those fees flow into the **Magic Lamp** wallet. When the Lamp reaches **\$1,000,000**, an autonomous AI — the **Genie Agent** — sends the entire amount to one random holder, turning them into a millionaire. Then the Lamp refills, and it happens again.

There is no team treasury. The fees go out. Every time the Lamp fills, a new millionaire is made.

Our goal is simple and bold: to become **the coin that makes the most millionaires in the world**.

AT A GLANCE

Token	GENIE
Supply	500,000,000,000,000 (500 trillion)
Decimals	18
Buy / sell tax	5% / 5% — hardcoded, immutable
Wallet transfers	0% fee
Network	Ethereum
DEX	Uniswap
Payout milestone	Lamp reaches \$1,000,000
Who pays out	The Genie Agent (autonomous AI)

THE MECHANISM

1. A buyer or seller trades GENIE on Uniswap.
2. The contract collects a 5% fee in GENIE on each side.
3. Once ~1 trillion GENIE has accumulated (~0.2% of supply), the next sell triggers an auto-swap; the collected fees are converted and forwarded to the Magic Lamp wallet.

4. The **Genie Agent** watches the Lamp. The moment its value reaches **\$1,000,000**, the Agent picks one holder at random and sends them the full amount.
5. The Lamp refills from new fees, and the cycle repeats — forever.

No daily timer, no human pressing the button. The Lamp fills as the community trades; when it reaches the milestone, the Agent acts.

THE GENIE AGENT — AI AT THE CORE

The Genie Agent is what makes GENIE an AI coin: an autonomous agent that operates the Magic Lamp.

- It continuously monitors the Lamp's value.
- At the **\$1,000,000** milestone, it autonomously selects one holder at random and transfers the funds.
- No admin chooses the winner — the Agent does.

A memecoin whose payouts are executed by an AI, not by a person: that is the Crypto × AI bet at the heart of GENIE.

*Implementation specifics — how the Agent sources randomness, how its wallet key is secured, and how each payout can be independently verified — are **[to be detailed at launch]**. We would rather state this plainly than overclaim.*

TOKENOMICS

Total supply	500,000,000,000,000 GENIE (500T)
Initial liquidity	Owner-funded at launch
Team allocation	None
Presale	None
Vesting	None
Buy tax	5% — Solidity constant
Sell tax	5% — Solidity constant
Wallet transfers	0%
Fee destination	100% → Magic Lamp

TRUST MODEL

- **Fees are immutable.** BUY_FEE and SELL_FEE are Solidity constants. No owner function exists to change them, ever.
- **No mint, no blacklist.** The full supply is minted once in the constructor. The owner cannot mint, freeze, or deny any address.
- **Immutable plumbing.** Router and trading-pair addresses are set at deploy and cannot be redirected.
- **Self-rug guard.** The owner rescue function explicitly refuses to withdraw GENIE from the contract, so accumulated fees stay on their path to the Lamp.
- **One-way launch protections.** The trading gate, 1% max-tx, and 1% max-wallet can be lifted by the owner exactly once. The max-wallet limit does not apply to sells, so holders can always exit.

THE HONEST TRADE-OFF

The Magic Lamp is operated by the Genie Agent, and like any wallet it has a key that must be held somewhere. We will not pretend that away.

- **The fee cannot change.** Hardcoded at 5%, it leaves the contract on every auto-swap. Nobody can raise it, lower it, or skim above it.
- **Every payout is public.** The Lamp wallet and each payout transaction will be published, so anyone can verify every millionaire on-chain.
- **What is still being finalized.** The custody of the Agent's key, its randomness source, and its verification method are **[to be detailed at launch]**.
